EDUCATION

- **JSS Academy of Technical Education** Noida, India
• *Bachelor of Technology in Information Technology* July 2021 – June 2024
Coursework: Operating Systems, Data Structures, Design and Analysis of Algorithms, Computer Networks, Web Development, DBMS, OOP Concepts
- **Government Polytechnic Jaunpur** Jaunpur, India
• *Diploma in Electronics Engineering, BTEUP* July 2017 – June 2020
Coursework: Engineering Mathematics, Engineering Physics, Engineering Chemistry, Electronic Devices and Circuits, Digital Electronics, Communication Engineering
- **Radhika Bal Vidya Mandir** Jaunpur, India
• *Secondary School (Class 9,10), CBSE Board* April 2015 – March 2017
Subjects: Mathematics, Science, Social Science, Hindi, English

SKILLS SUMMARY

- **Language:** Python , SQL , Javascript
- **Data Analysis Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Excel, Power BI, Tableau , SQL
- **Developer Tools:** Google Colab, VS Code, PostgreSQL, MySQL, Git/GitHub
- **Web Technologies:** Flask, Django, Bootstrap, HTML/CSS, JavaScript

INTERNSHIP

- **Web Development Trainee - HTML,CSS,JavaScript,Python,Flask,Django** Remote
Jul 2023 - Aug 2023
 - **Proficient in Front-End Technologies:** Gained hands-on experience in HTML, CSS, and JavaScript, enabling the development of responsive and user-friendly web interfaces.
 - **Experience with Back-End Development:** Developed server-side applications using Flask learning to create APIs and manage database interactions effectively.
 - **Understanding of Version Control Systems:** Familiarized with Git and GitHub for version control, enabling efficient collaboration and management of project codebases.
 - **Knowledge of Web Development Frameworks:** Acquired practical skills in using popular frameworks such as Flask, Django enhancing the ability to build scalable and maintainable web applications.

PROJECTS

- **FedEx Logistics Analytics(EDA + Visualizations , Tableau Dashboard):** Developed an end-to-end data analytics solution for FedEx's medical supply chain, analyzing 10,300+ shipment records across multiple countries to optimize delivery performance and logistics costs. Leveraged Python (Pandas, NumPy, Matplotlib, Seaborn) for comprehensive EDA, including data cleaning, feature engineering, and statistical analysis to uncover insights on delivery delays, vendor reliability, and cost drivers. Designed an interactive Tableau dashboard with geospatial maps, trend analyses, histograms, scatter plots, heatmaps, and vendor performance matrices, enabling stakeholders to monitor key KPIs (on-time delivery rates, average delay days, total logistics costs). Implemented calculated fields and interactive filters for drill-down analysis by country, product group, and shipment mode, transforming raw data into actionable business intelligence. Identified seasonal delivery patterns and vendor performance trends, leading to strategic recommendations for improving delivery reliability and cost efficiency. Delivered a scalable solution demonstrating expertise in data wrangling, visualization, storytelling, and supply chain analytics.
- **Amazon Prime Video Content Analytics(EDA + Visualizations , Tableau Dashboard):** Spearheaded a comprehensive data analytics project on Amazon Prime Video's content library, processing 9,800+ titles and 124,200+ credits through Exploratory Data Analysis (EDA) using Python, Pandas, and NumPy to uncover actionable insights on content diversity, genre trends, and regional production patterns. Implemented advanced data preprocessing and feature engineering to clean and transform the dataset, followed by systematic statistical analysis with multiple visualizations using Matplotlib and Seaborn to identify key performance drivers across genres, production countries, and content types. Designed an interactive Tableau dashboard featuring multiple visualizations with dynamic filters, KPI cards, and cross-filtering capabilities, enabling stakeholders to explore content distribution, genre dominance, production origins, and quality metrics. Delivered actionable insights for content strategy optimization, identifying TV show gaps and high-performing genres to guide acquisition decisions, resulting in enhanced subscription growth potential. Demonstrated proficiency in Python, data visualization, and business intelligence tools while building a scalable analytics framework for streaming content optimization.
- **Convertify:** Developed a web application using Flask and Bootstrap for seamless document conversion between formats like JPG and PDF, featuring a responsive and user-friendly interface. Implemented secure file handling mechanisms and optimized backend processing to ensure high performance and scalability. Integrated efficient Flask-based logic to handle conversions with precision and reliability. Followed best practices for deployment, hosting the application on Render.com for robust accessibility. Delivered a scalable and secure solution, demonstrating expertise in web development and deployment workflows
- **Taskly:** Developed a dynamic to-do web application using Flask and Bootstrap, featuring a responsive and intuitive interface for efficient task management. Enabled users to seamlessly create, update, and delete tasks with secure and robust backend functionality. Ensured scalability and smooth accessibility by deploying the application on a reliable platform. Focused on delivering a user-friendly experience with clean design principles. Adhered to best practices in web development for performance and maintainability.
